

equal to the halfe of P A V, or of p A v; nor yet q p equal to the halfe of q y, nor q p A to the halfe of q y A; (*the Triangle q y A will be equal to the Sector L C A* (because A L p y is common to both;) *and like to the Triangle G C A, and a part of it;* which he thought to have been impossible.

Note

WHAT in N°. 54. p. 1077. in the *Answe. to Qu.* 1. is said of the Observation of Briners, is to be understood, that the Workmen *think* so, that they make more Salt with the same quantity of brine, at the Ful Moon, then at other times, though really they do not, as the Answerer Judgeth by his *obser.* in N°. 53. p. 1064: Who hath since advertis'd, that 'tis possible at times, when the Pit hath been much drawn first, that then, if without intermission they go on *walling* till the *Full*, they may make at that time more Salt, than at another time, it being well known, that much drawing the Pit, strengthens the Brine.
